# NEUTROPHILIC INFLAMMATION IN THE RESPIRATORY MUCOSA PREDISPOSES TO RSV INFECTION

Webinar 3 - January 27th, 2021

16:00 - 17:00 CET

## RSV WEBINAR SERIES

### FOCUS

Publication: **Neutrophilic Inflammation in the Respiratory Mucosa Predisposes to RSV Infection**, Science (2020) [Click Here](#)

### OBJECTIVES

Why does RSV exposure in one individual lead to disease, while another individual does not experience symptoms at all? This webinar will focus on the mucosal neutrophil activation as a new factor involved in RSV susceptibility and protection. These findings shed light on mechanisms of viral susceptibility and suggest new targets for RSV intervention. Through interactive discussion and interview with guest speaker, prof. Peter Openshaw and co-host, prof. dr. Linde Meyaard, participants can ask questions directly to the speaker and they can take back lessons learned from these findings to their own research.

### AUDIENCE

Clinicians, researchers, pharmaceutical industry workers, global health workers, public health workers
